

SSCI 580, Spatial Computing
Tentative Syllabus

Units: 4

Term — Day — Time: Fall, 2015; Wednesdays, 2:00-5:00 p.m.

Location: AHF B57J

Instructor: Craig A. Knoblock, Ph.D.

Office: AHF B55A

Office Hours: Wednesdays 10-11am

Contact Info: knoblock@usc.edu, 310-448-8786

Library Help: Andy Rutkowski

Office: VKC B38B

Hours of Service: Mondays, 1:00-3:00 p.m.; Thursdays, 10:00-12:00 p.m., or other times by appointment

Contact Info: arutkows@usc.edu, 213-740-5398

IT Help: Richard Tsung

Hours of Service: Monday to Friday, 9:00 a.m.-5:00 p.m.

Contact Info: ctsung@usc.edu, 213-821-4415

Course Description

This class will cover the theoretical foundations, methods, techniques, and software systems for spatial computing. This includes the latest research in a variety of topics that are central to spatial computing, including the geospatial semantic web, geospatial linked data, spatial data mining, geocoding, document linking, location-based services, volunteered geographic-information, feature extraction, layer registration and alignment, and geospatial mashups. Students will also gain a deep understanding and hands-on experience in the software for spatial computing, including geographic information systems (e.g. ArcGIS), online GIS (e.g. ArcGIS Online, Bing Maps, Google Earth), and semantic web tools through a series of homework assignments. Students will learn about the wide variety of geospatial data and services available, including how to find relevant data and transform it as needed so that it can be used for solving specific problems.

Learning Objectives

On completion of this course, students will be able to:

- Describe the theoretical foundations of geospatial data and its various representations.
- Select and use the appropriate geographic information system to solve any of a variety of real-world problems.
- Build integrated applications that combine geographic data and applications for processing that data.
- Understand, create, and apply semantic descriptions of geographic data which can then be used for searching, integrating, and sharing geographic knowledge.
- Discuss the relevant spatial computing systems and techniques for working with geospatial data.
- Apply relevant spatial computing techniques to solve spatial problems.
- Critically evaluate spatial computing software and systems and determine whether they have been applied in appropriate ways.

Prerequisite(s): None

Co-Requisite (s): None

Concurrent Enrollment: None

Recommended Preparation: Enrollment in the USC M.S. Program in Spatial Informatics

Course Notes

The course will be taught using a lecture format where the instructor presents the material in class. There are weekly quizzes to ensure that students keep up with the material and readings. In this class there are weekly homework assignments to give students first-hand experience with the wide variety of software and systems that can be used for spatial computing. The class will encourage student participation with ample discussion time for reviewing readings, homework, quizzes, and other course material.

Technological Proficiency and Hardware/Software Required

The mapping software and geospatial data required for course assignments will be accessed using computing resources provided by the Spatial Sciences Institute.

Required Readings and Supplementary Materials

1. Clarke K C (2011) *Getting Started with Geographic Information Systems* (Fifth Edition). Upper Saddle Creek, NJ, Prentice Hall (Chapters 2 and 3)
2. Clemmer G (2013) *The GIS 20 Essential Skills*. Redlands, CA, Esri Press
3. Google (2013) Google Earth Tutorials. WWW document, <http://www.google.com/earth/outreach/tutorials/all.html>
4. Microsoft (2013) Bing Maps Videos. WWW document, <http://www.microsoft.com/maps/developers/videos.aspx>
5. Manola F and Miller E (2004) Rdf primer. Technical report, W3C. <http://www.w3.org/TR/2004/REC-rdf-primer-20040210/>.

Description and Assessment of Assignments

Students must participate in class discussions, take weekly quizzes, and turn in weekly homework assignments.

Quizzes (25%): There will be weekly quizzes on the lectures and readings from the previous week.

Homework (50%): Students will be assigned weekly homework during the entire course with a total of 12 homework assignments.

Final (25%): There will be a final exam at the end of the course that covers the material covered during the entire semester.

Grading Breakdown

Assignment	Points	% of Grade
Quizzes	140	25
Homework	120	50
Final	100	25
TOTAL	360	100

Assignment Submission Policy

Assignments will be submitted for grading via Blackboard using the due dates specified in the Course Schedule below.

Additional Policies

Students are expected to attend and participate in every class session and to complete and upload all assignments before the deadlines detailed in the Course Schedule. Students can turn in a homework assignment up to 1 week late with a 20% penalty.

Course Schedule: A Weekly Breakdown

	Topics/Daily Activities	Readings and Homework	Deliverables/ Due Dates
Week 1 8/25	Introduction/Spatial Data Basics: Brief introductions with a discussion of class goals, technology, plans, and expectations. Basics of spatial data, incl. representations of spatial data, coordinate systems, datums, projections, etc.	Clark (2011)	
Week 2 9/1	Geographic Information Systems: Hands-on use of ArcGIS to develop familiarity with the basic capabilities of GIS systems.	Clemmer (2013)	Quiz
Week 3 9/8	Online GIS: A discussion and hands-on training with online GIS software, with a particular focus on Bing Maps and Google Earth.	Microsoft (2013) and Google (2013)	Quiz Assignment 1
Week 4 9/15	Geospatial Semantic Web Basics: Semantic Web basics of representing	Manola & Miller (2004), W3C (2004),	Quiz

	and querying data and ontologies, including RDF, JSON-LD, SPARQL, OWL	Harris & Seaborne (2012), and Markus et al. (2012)	Assignment 2
Week 5 9/22	Geospatial Semantic Web: Methods for representing and reasoning about geospatial data using the infrastructure of the Semantic Web. Hands-on use of tools for creating and using geospatial semantic data.	Swartz (2002); Palmer (2001); Fonseca (2008); Egenhofer (2002); Kuhn (2005); Becker & Bizer (2009)	Quiz Assignment 3
Week 6 9/29	Geospatial Linked Data: Research and techniques for creating and using geospatial linked data.	Koubarakis et al. (2012); Parundekar et al. (2010); Janowicz et al. (2012)	Quiz Assignment 4
Week 7 10/6	Geospatial Mashups: Introduction to the research, tools, and techniques for building online integrated applications with geospatial data, focusing on the ability to rapidly compose new applications from available sources and services.	Wong & Hong (2007); Intel (2012); Tuchinda et al. (2008); Gupta & Knoblock (2010); Wang et al. (2009)	Quiz Assignment 5
Week 8 10/13	Geocoding: Methods and approaches to linking addresses to location	Bakshi et al. (2004); Goldberg & Cockburn (2010); Goldberg et al. (2007, 2010); Davis et al. (2003); Zandbergen (2008)	Quiz Assignment 6
Week 9 10/20	Linking Text to Location: Methods and approaches for linking textual information to geographic locations.	Knoblock (2012); Lieberman et al. (2007, 2010); Amitay et al. (2004); Rauch et al. (2003); McCurley (2001); Ouercini et al. (2010)	Quiz Assignment 7
Week 10 10/27	Registering and Aligning Geospatial Layers: Discussion of techniques for automatically aligning various geospatial layers, including both vector and raster layers.	Chen et al. (2006, 2008); Wu et al. (2007); Zitova (2003)	Quiz Assignment 8
Week 11 11/3	Extracting Features from Raster Maps: Methods for extracting features from scanned raster maps.	Chiang (2009); Li et al. (2000); Kerle & de Leeuw (2009); Pouderoux et al. (2007); Leyk & Boesch (2010)	Quiz Assignment 9
Week 12	Spatial Data Mining:	Shekhar et al. (2003);	Quiz

11/10	Introduction to techniques for spatial data mining.		Assignment 10
Week 13 11/17	Spatial Data Reasoning: Introduction to techniques for spatial data reasoning.	Gupta & Knoblock (2010); Michalowski & Knoblock (2005); O'Brien & Irvine (2004); Savopol & Armenakis (2002)	Quiz Assignment 11
Week 14 11/24	Volunteered Geographic Information (VGI): Recent developments in volunteered geographic information (VGI), including the widely used sources, techniques for crowd-sourcing data, and attempts to evaluate the quality of VGI data.	Jiang (2012); Goodchild & Li (2012)	Quiz Assignment 12
Week 15 12/1	Location-based Services and Privacy: Various features of successful modeling applications, including the need for authenticity (i.e., the evaluation of the model relative to the real system), parsimony (i.e., the desirability of keeping things simple and avoiding unnecessary complications), transparency (i.e., the need for clear documentation and user-friendly organization of both the model and the documentation), and patience (i.e., the fact that it takes time to construct and/or implement a model).	Junglas & Watson (2008); Dey & Abowd (2000); Myles et al. (2003)	Quiz

Statement on Academic Conduct and Support Systems

Academic Conduct

Plagiarism – presenting someone else's ideas as your own, either verbatim or recast in your own words – is a serious academic offense with serious consequences. Please familiarize yourself with the discussion of plagiarism in *SCampus* in Section 11, *Behavior Violating University Standards* <https://scampus.usc.edu/1100-behavior-violating-university-standards-and-appropriate-sanctions>. Other forms of academic dishonesty are equally unacceptable. See additional information in *SCampus* and university policies on scientific misconduct, <http://policy.usc.edu/scientific-misconduct>.

Discrimination, sexual assault, and harassment are not tolerated by the university. You are encouraged to report any incidents to the *Office of Equity and*

Diversity <http://equity.usc.edu> or to the *Department of Public Safety* <http://capsnet.usc.edu/departments/departments-public-safety/online-forms/contact-us>. This is important for the safety of the whole USC community. Another member of the university community – such as a friend, classmate, advisor, or faculty member – can help initiate the report, or can initiate the report on behalf of another person. *The Center for Women and Men* <http://www.usc.edu/student-affairs/cwm/> provides 24/7 confidential support, and the sexual assault resource center webpage <http://sarc.usc.edu> describes reporting options and other resources.

Support Systems

A number of USC's schools provide support for students who need help with scholarly writing. Check with your advisor or program staff to find out more. Students whose primary language is not English should check with the *American Language Institute* <http://dornsife.usc.edu/ali>, which sponsors courses and workshops specifically for international graduate students. *The Office of Disability Services and Programs* http://sait.usc.edu/academicsupport/centerprograms/dsp/home_index.html provides certification for students with disabilities and helps arrange the relevant accommodations. If an officially declared emergency makes travel to campus infeasible, *USC Emergency Information* <http://emergency.usc.edu> will provide safety and other updates, including ways in which instruction will be continued by means of blackboard, teleconferencing, and other technology.
